

For any lack of reflection of “synergetic culture”

Delineators

1. Lack of people-governors
2. Lack of management of stand offs
3. People being unaware of threat or risk
4. People adversely affected by crowd influencers
5. People feeling the Inter-dependency is not their opinion
6. People not resolute about stand to assist the government

Choices

1. Determining a stakeholder who can represent the crowd or people showing lack of synergy at a Centre, or location
2. Deciding on the balance being offered for being at each Centre, for being away from home or out of what they recognize as work
3. **Activating burden reduction via TPA networks for their distant families or dependents**
4. **Defining** post-lockdown involvement for each of them, thus grid enabled synergy at next levels will matter

Emergence & Service Carts (Gaps)

Governmental involvement is considered a constructive and/or a destructive interference. Today, work may not be available to many who do not have a way to offer their services. The number of cycles that can use helpful services can start optimum control.

The need is for relevant membership into Service Carts for people to offer their services. The Service Carts can either be Grid based, Work place (Site) based or Grid and Site based.

Emergent Trade Centres with Service Organizers could review these Service Carts to provide constructive focus. The health threat is more critical than old intent.

Emergence & Multi-loop feedback control (SD)

Life needs to be protected and with it comes the need to promote the availability of Government enabled Centres (People Centes, LiveStock Centres and Emergent Trade Centres) . Much of this is already a positive effort.

We speak about an Emergent Trade Centre to understand need (or larger need for resultant work), and to invest after knowing services needed / services offered, service orientation required, relevant communications for the services, relevant interest for 2020 sensitized objectives and specifications.

The Government does not or cannot expect to be the only problem solver for all this. Chartering Service Carts for Emergent Trade Centres can help the many who do not have money or resources to work independently. **Trade or services on-the-basis of resultant work may be a wave of help.**

Companies, businesses and governments could use these Service Carts to use people at specific locations for work or for manufacturing level automation, or for productive Involvement in **different SD programmes.**

SD: stands for Solution Deployment

Emergence & Service Carts (Gaps)

Grid enabled organizations could shape open design models, and focus for production, product/component/part development, and enable service carts for supporting membership, open enterprise partnership for new solutions, new interoperability and re-engineering objectives for macro processes.

24/7 closed loop systems may not be able to deal with emergence, as a producer, provider, supplier, supply system or supply chain may be adversely affected, multi-loops can help.

Service Cart for Resultant Work Scenario 1

For this, organizations could publish

1. Resultant Work Functions
2. Materials Requirements
3. Lead/Lag time for Inventory / Stock
4. Just-in Time Purchasing Plan
5. Shortage of Labor and Plan for fulfillment
6. Production Scrap Related Schedule to reduce waste or added burden on disposal systems

Emergence & Multi-loop feedback Control (SD)

Our tomorrow needs a sure and supportable environment.

Generations look forward to 24/7 operations but the lack of Relation Examination will or has adversely affected this.

Industrial management must nestle into a Generation Theory, that helps access knowledge that forwards grounds for decision-making or conceptualization.

The Generation Theory that can help is, to inter-emerge with resultant work. Developing Grid enabled organizations or open enterprises can be a solution for the macro processes of

- a. Networked Supply Chain Management
- b. Producer/Provider/Supplier/Distributor Relationship Management. Grids of systems are known in the IT and service industry.

Emergence & Service Carts (Gaps)

Service Cart for Resultant Work Scenario 2

For this, organizations could publish

1. Resultant Work Functions
2. Need for **Point Slope Interception of Continuous Improvement for QOL/RM**
3. **Need for Condition monitoring of the site**
4. **Need for Preventive methodologies or solutions for macro processes**
5. **Need for Corrective methodologies or solutions for macro processes**
6. **Need for Risk Mitigation of Location Dynamics and Need for response**

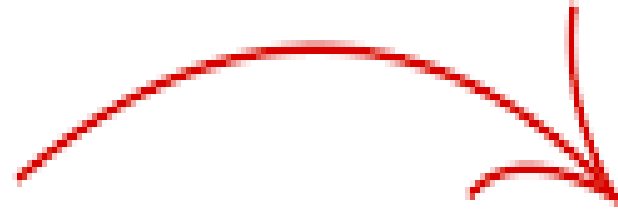

Expertise is not knowledge but joint momentum for deploying solutions and addressing problems for emergent trade or services. Parameterization of Resultant Work Functions and Natural Systems Interfaces can help work management, services or response to relocate to each business's Join Us site. Any Join Us site is official systemic involvement for help.

The Generation Theory and Service Organization for **Quality of Life (QOL) specific Response Services or Risk Mitigation (RM) Response Services**

- Solutions deployment is a stage that we are all connected with, the consultant can be contacted at venkataoec@gmail.com or on +91 9342867666. The Join Us endeavor can help in this limited configuration of systems. Our boundless Expectations may not be as helpful as identifying scenarios for systemic involvement.

Require motivated, capable people

Operational
Choices

Investment
in People

Need return on people investment

The NEXT Steps depend upon each system that can configure itself for this crisis
